

Arkansas Reports Cases Determined in the Supreme Court of Arkansas Volume 27

Filesize: 6.22 MB

Reviews

This ebook is very gripping and fascinating. Sure, it is engage in, nevertheless an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Ms. Ora Buckridge)

ARKANSAS REPORTS CASES DETERMINED IN THE SUPREME COURT OF ARKANSAS VOLUME 27

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 44 pages. OCLC Number: (OCoLC)51045877 Subject: Nuclear power plants -- Risk assessment -- United States. Excerpt: . . . Driving Forces 2. 2. 1 1 2 The primary driving force that will resuspend particles in the building-occupancy scenario can be expected to be mechanical forces associated with rubbing and abrasion of surfaces. These 34 forces are typically caused by the activities or movements of the occupants like walking and 5 moving carts (Corn and Stein, 1967; Morton, 1999). In buildings, air currents caused by normal room ventilation or by vibrations are not expected to be a major cause of resuspension of 6 particles (Walker et al. , 1967; Hinds, 1982). Moreover, RFs determined from mechanical 78 disturbance can be one order of magnitude higher than RFs determined with air currents only 9 (Beyeler et al. , 1999). Higher RFs were measured when driving forces were increased and 10 when the surface contamination was loose or easily removable. Several studies of RF, including Fish, et al. (1967), observed a power-law relationship between air velocity and RF. 11 Fish, et al. (1967) also reported a difference in the RF of greater than an order of magnitude due 12 13 to the type of driving forces. Jones and Pond (1967) also reported variations in the RF from 14 different walking speeds. Therefore, it is important to assess the types and intensity of the applied driving forces to evaluate the corresponding RF measurements, to determine if they are 15 16 reasonably representative of the building-occupancy scenario. For the building-occupancy scenario, driving forces (worker activities movements) should 17 simulate normal workplace activities that would occur over an entire average...
